

9.3 The Normal Distribution

Discrete vs. Continuous Random Variables and their Distributions

Normal Distributions

Figure 1: <https://www.desmos.com/calculator/zrimuyaxnu>

Standard Normal Distributions

1. Suppose z is a random variable with a standard normal probability distribution. Find the following probabilities.
 - (a) $P(z \leq 1.36)$
 - (b) $P(z \geq -0.71)$
 - (c) $P(0.34 \leq z \leq 2.18)$

Figure 2: <https://www.desmos.com/calculator/bwzp8b5nfa>

z -scores

z -Score

If a normal distribution has mean μ and standard deviation σ , then the z -score for the number x is

$$z = \frac{x - \mu}{\sigma}.$$

Area under a Normal Curve

The area under a normal curve between $x = a$ and $x = b$ is the same as the area under the standard normal curve between the z -score for a and the z -score for b .

Example 1. The exact volume x of Coca-Cola inside each 12 oz can is a random variable. Suppose x has a normal distribution with mean $\mu = 12.08$ oz and standard deviation $\sigma = 0.05$ oz.

(a) Find the probability that a 12 oz can of Coca-Cola contains less than 12 oz?

- (b) Find the probability that a 12 oz can of Coca-Cola contains more than 12.2 oz?

Example 2. The weight x of each package shipped by an online clothing retailer is a random variable. Suppose x has a normal distribution with $\mu = 4.8$ lbs and standard deviation $\sigma = 1.1$ lbs.

- (a) Find the probability that a randomly selected package from this retailer weighs between 4 and 5 lbs.
- (b) If this retailer ships 15 packages, what is the probability that exactly 6 of them weigh between 4 and 5 lbs?

Example 3. Let z be a random variable with the standard normal probability distribution ($\mu = 0$, $\sigma = 1$). Use the table provided at the end of the exam or a calculator to answer the following questions.

- (a) Determine the value z_0 such that $P(z \leq z_0) = .025$.
- (b) Determine the value z_0 such that $P(z \geq z_0) = .305$.

Example 4. Suppose that you must establish regulations concerning the maximum number of people who can occupy an elevator. A study indicates that if eight people occupy the elevator, the probability distribution of the total weight x of the eight people is normally distributed with a mean $\mu = 1200$ pounds and a standard deviation $\sigma = 99$ pounds.

- (a) What is the probability that the total weight x of eight people exceeds 1425 pounds?
- (b) Determine the value x_0 such that the probability that the total weight x of the eight people exceeds x_0 is .001.

Example 5. Each week, a particular charity collects x dollars in donations. The mean and standard deviation for x are 2,675 and 345, respectively. Assume x is normally distributed.

- (a) What is the probability that this charity raises more than \$3,000 next week?
- (b) Assuming that the amount of money donated each week is independent of the amount of money donated every other week, what is the probability that this charity raises more than \$3,000 each week for the next 3 weeks?

Example 6. Weights of chicken eggs are normally distributed with mean $\mu = 2.53$ oz and standard deviation $\sigma = .24$ oz.

- (a) What is the probability that a randomly selected chicken egg weighs more than 2.75 pounds?
- (b) What is the probability that exactly 4 out of 10 randomly selected chicken eggs weigh more than 2.75 lbs?
- (c) If Jumbo eggs are defined to be eggs with a weight in the 90th percentile, what is the minimum weight of a Jumbo egg?

Example 7. Suppose the random variable x has a normal distribution and mean $\mu = 90.2$. If $P(x \leq 85.7) = .0336$, find the standard deviation σ .

Example 8. Suppose the random variable x has a normal distribution and standard deviation $\sigma = 12.6$. If $P(x \geq 521.8) = .2296$, find the mean μ .
