Math 150 Mathematics for the Contemporary World	Quiz 4

Please show all work and **box your final answers**. If you need more room, you may use the backs of the pages. Calculators are allowed, but cellphones are not. Good luck!

- 1. Suppose the population of Rochester, NY is currently 800,000 and it is increasing at a constant rate of 40,000 per year.
 - (a) (4 points) Find an equation for the population of Rochester, NY t years from now.

(b) (4 points) When will the population of Rochester, NY reach 1,400,000?

2.	Suppose the population of Buffalo, NY increases by 4% each year and the population is currently $650,000$ (a) (4 points) Find an equation for the population of Buffalo, NY t years from now.
	(b) (4 points) What will the population of Buffalo, NY be 16 years from now?

3.	(4 points) If the value of a particular comic book increases at a monthly rate of 1%, by what percentage does it increase in a year?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
4.	(4 points) Suppose a population of bacteria doubles every 10 hours. If the population is currently 350 what will the population be in 24 hours?
